2021-CURRENT DMAX/BT50 BATTERY BRACKET INSTALL

Installation is very simple, the battery mounted bracket bolts on-top, of the original battery clamp.

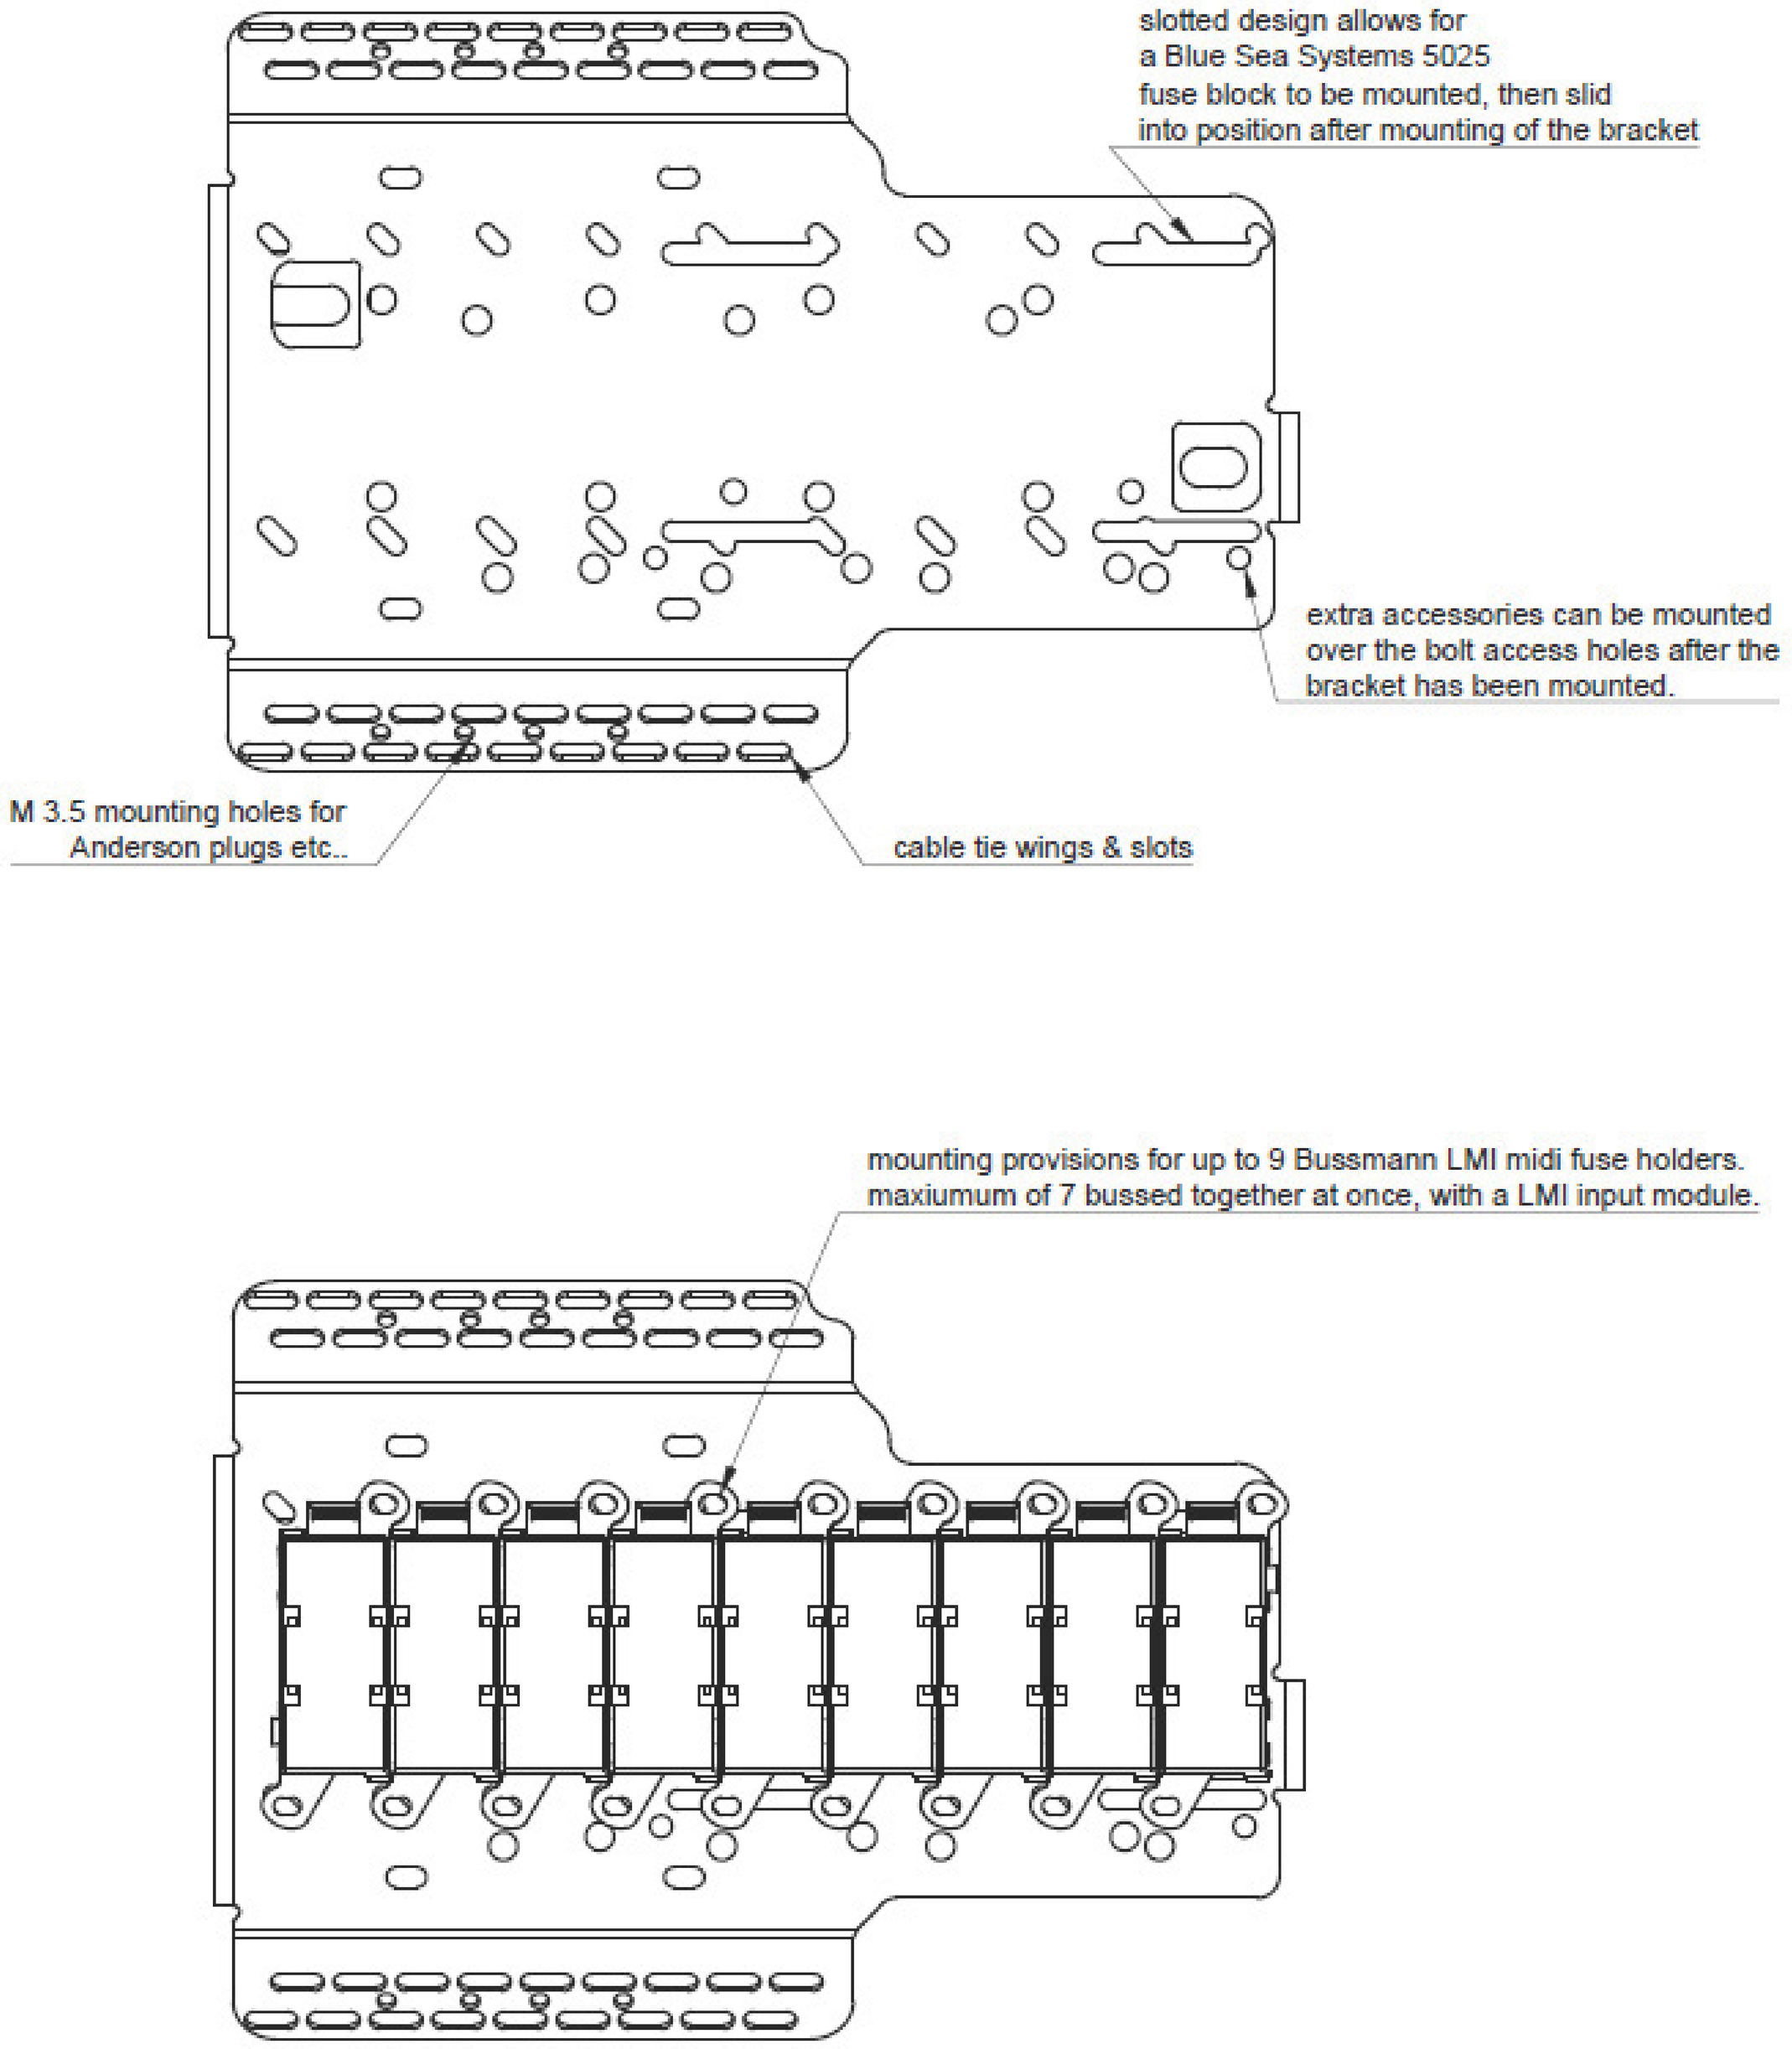

To do this, remove both battery clamp bolts, sit the battery bracket on-top of the existing battery clamp (lining up the mounting holes), and re-tighten the battery clamp bolts. A 13mm socket,ring spanner/ ratcheting spanner can be used.(sockets can be to thick to fit sometimes, so ratchet spanner is handy!)

2021-CURRENT DMAX/BT50 BATTERY BRACKET INSTALL

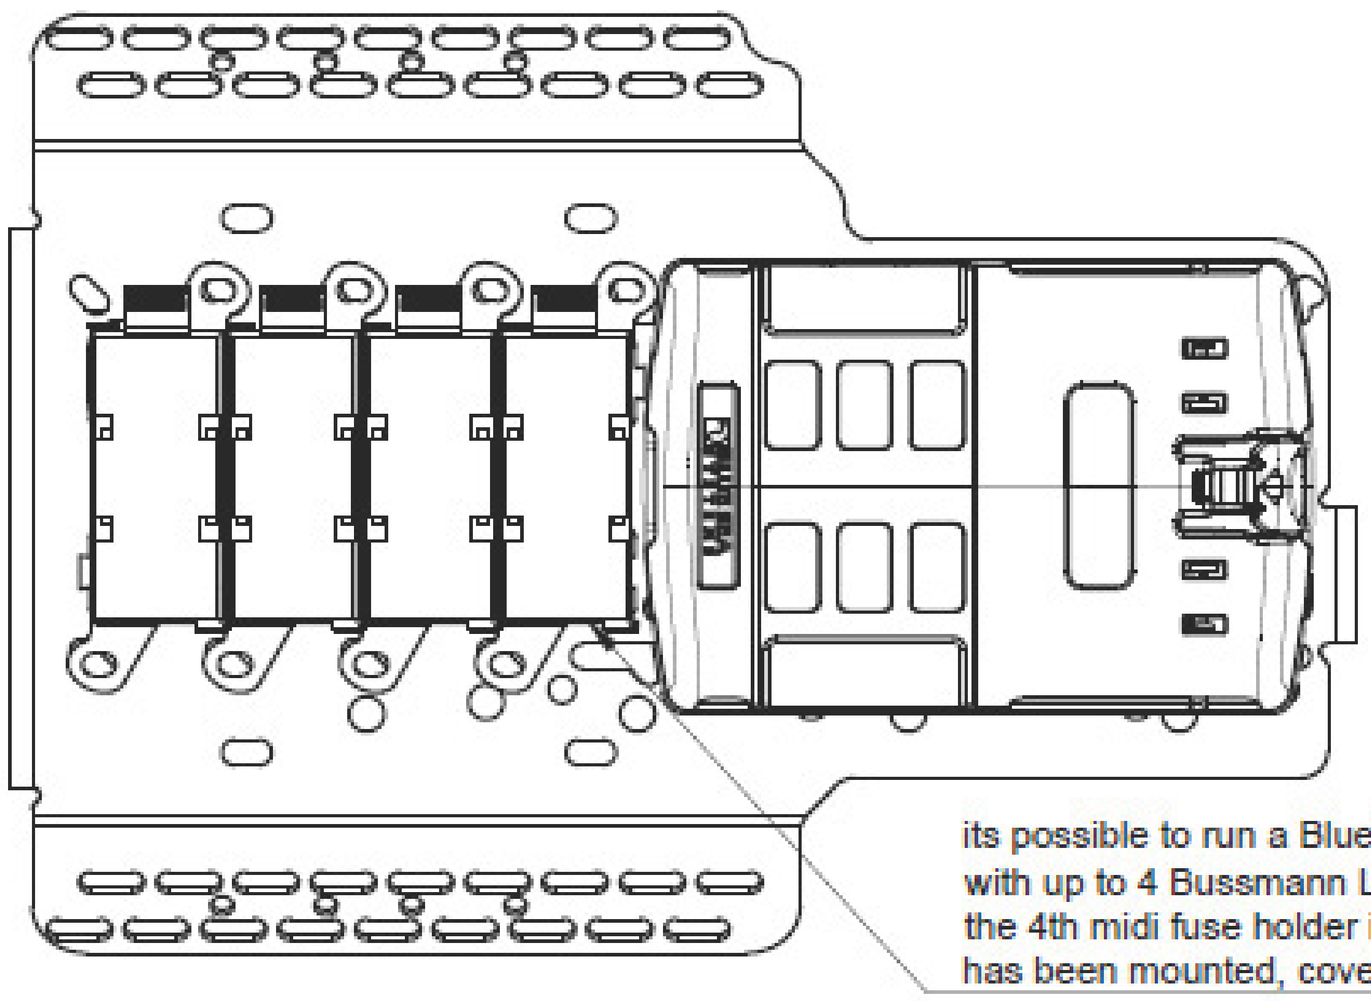

Below are some common 12-volt accessory setups, all of which have mounting holes allowed for in the bracket.

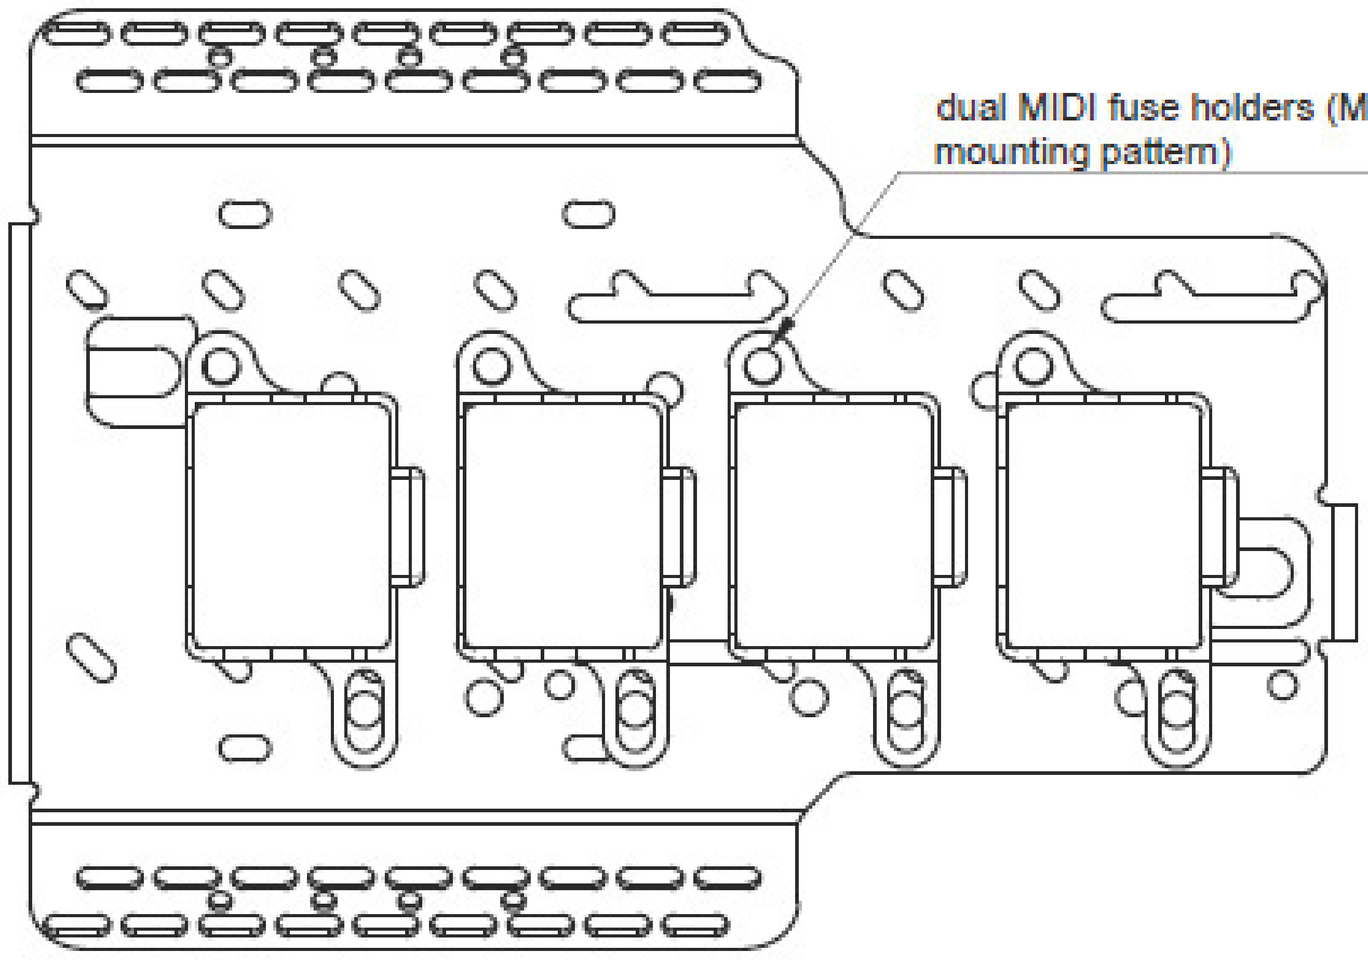

If you wish to add your own, be mindful of bonnet clearance, always check before final wiring!
